Contemporary society

Complexity, chaos, authority, individualism,
otherness, tribalism

Social challenges

Twin transition – Triple transition

Transformative innovation through openness

Open education – Human capital

Contemporary society

More choices, complexity, chaos

Individualism

Tribalism, sense of belonging

We now have too many choices.
We make decisions 25 times more than in the 80s.
We make about 35 thousand decisions each day.

Complexity: From authority to otherness

The contemporary society (post-industrial) is characterised by a change in the way we interact with the world. We are no longer guided by institutions or by authority. There has been a shift from *authority* to *otherness*. There are no longer set standards, expectations, or fixed rules. It is characterised by unpredictability.

Individualism

We like to be treated as 'individuals', and to have our preferences respected

e.g. what we buy and how we buy things have changed: e.g. the pair of trainers that we design, the playlist that we build to our liking, the type of coffee we drink, the type of diet we follow...

Tribalism

Although we like to perceive ourselves as unique, from an individual perspective, we also like to align ourselves to certain groups of people, or ways of thinking, so that we feel we belong...

We are not searching for or creating our own ideas, but aligning ourselves to the ideas that make us feel that we belong to a certain group.

59 Open science and open education

Purpose: To foster inclusion and innovation
Use: To enable new practices and policy design to promote transformation at the system level

Europe is lagging behind in translating research and innovation (R&I) results into the economy. Efforts need to be channelled towards strengthening industrial innovation, technology transfer and fostering the diffusion of innovation through knowledge transfer and public-private cooperation (EC ERA Communication 2020). A way to do it is through **Open Science** and **Open Education**, to increase stakeholder engagement and investment in human capital. The European Research Area has enhanced access to open, free of charge, re-usable scientific information through the Open Science initiative, and the recently launched European Open Science Cloud (EOSC) creating a cloud area for research data in Europe allowing for better science through open and collaborative knowledge sharing.

As skills needs are rapidly evolving, and the green and digital transition requires future-proof education, the higher education sector has to adapt. Diversity, inclusiveness and gender equality in the higher education sector have become more important than ever (EC Communication 2022). Universities have a unique position at the crossroads of education, research, innovation, serving society and economy, through knowledge transfer and sharing. In this sense, open educational practices play an essential role, creating a route for communication between what is produced 'inside the university' to the world 'out there' – and this includes businesses, local authorities and citizens.

transformative change. This ecosystem of practices contributes to professional development and upskilling the workforce in local economies. It also opens up a dual way for communication between the universities and the community around them. Regional innovation depends upon a multi-stakeholder approach, in which smart specialisation strategies (S3) for universities play a crucial role in the triangle research, education and innovation.

OpenEdu framework.

Re- and up-skilling the workforce through an ecosystem of practices, such as opening up access to university knowledge via open courses, open educational resources, open learning pathways, micro-credentials and open research and data, is a way forward to

Building the future of education

“

2023 will be the European
year of skills.

”

Ursula von der Leyen

President of the European Commission

Jobs of the future & future-proof skills

Emerging jobs:

Ethical hacker; Metaverse architects

Jobs of the future:

Algorithmic transparency officer;
Data privacy strategist, artificial
intelligence educator, Metaverse
psychologist, Metaverse psychiatrist

Skills: lifelong learning,
entrepreneurship, digital
competence, problem solving,
creativity, STEAM

The future of education is ever more technology-based

What:

LMS
Digital Content (OER, modular)
Artificial intelligence
Teaching and learning (active methodologies)
Augmented - virtual reality
MOOCs or online courses
Microcredentials
Social media
Metaverse

How:

Interoperable - customisable
Open
Focus on pedagogy (active methodologies)
Challenge-based
Learner-centred (learning pathways)
Blockchain
No geographical boundaries
Distance education (online learning)
Autonomous learners

What is open education for you in
one or two words?

Educating for the future:

Why is open education important?

OE fosters inclusion in education

OE includes top-down and bottom-up approaches

OE can be performed at the individual level, by choosing to be an open educator or open learner (or both!)

OE fosters system change

OE can be the foundation for upskilling and reskilling

OE supports transformative innovation

OE requires an open mindset – an asset in itself

“

Be the change you wish to
see in the world.

”
